

Eduro: keeper of your secrets!

EDURO (Lat.): endurance

Activity

Eduro d.o.o. is the largest producer of fitted closets with sliding doors, sliding partition walls and cupboards in Croatia. Eduro products are built to last and custom-made. In its 11 years of conducting business, the company has grown from one to seventy respectable employees.

Mission

From the early beginnings, our primary goal is a SATISFIED CUSTOMER. We offer a complete service - from expert advice, design, projects and measuring to production, delivery, installation and warranty for all sliding systems. Eduro d.o.o. is holder of the ISO 9001:2002 quality standard for production and service.

Vision

- Follow the latest global trends in design, equipment improvement and materials in search of constant innovation
- Increase regional sales network

Awards

For our work in quality and design improvement, Eduro has received 9 awards locally and abroad, but the crown award belongs to the Gold Mobil Optimum award received at the 2007 Ambianta fair, with competition from over 700 exhibitors; and a Gold medal for product and exhibition area at the same fair in 2008. As one of the fastest growing companies according to business indicators in the country, Eduro has also received the Gazela award in 2005, 2006 and 2007.

Novelties

At the 2008 Ambianta fair we presented two new products and new revolutionary materials. Our mission is to bring ecological and natural materials into rigid and predetermined materials for furniture production.

Stone fill

Fills the sliding doors - metacrylate filled with natural materials; sand, gravel or crushed marble.

In this time of interior decoration tendencies of returning to natural materials, we have succeeded, in cooperation with Croatian innovator † Dizajn Šafarić from Krk, to produce a material with excellent visual, thermal and audio features.

Metacrylate, which is a hollow material, 10 mm thick, is filled by a special technique with Istrian sand and/or gravel of fine granulation and/or various sorts of noble crushed marble.

Laminated glass "SEASONS"

Safety glass, ideal for partition walls as well as sliding doors for customers that require unique design and materials.

Laminated glass is produced by the process of cold laminating, with two layers of glass each 4 mm thick, in between which we insert colorful fall foliage. The advantage of this new technological process of cold glass laminating is that all inserted natural materials keep their shape and beauty. With the process of hot laminating, the organic matter loses its shape and it is precisely for this reason that the cold laminating technique was developed.
